

COMMUNITEC

Bringing technology into design.

ABOUT US

Founded by Rory Hackett, Communitec began by specialising in IT solutions. Communitec has grown steadily and impressively for over 10 years; expanding, most recently, into AV integration.

Communitec AV's team are highly skilled and exceedingly capable of working in such an innovative industry. From our specialist team, you benefit from a simpler, much more personal management and engineering process.

With a dedicated approach to work, Communitec AV guarantees to not only provide you with the best possible service during the project itself, but to provide on-going technical support and assistance on any of our installations.

OUR PROCESS

Consultation

At this stage, we discuss your project - offering our specialist experience and attention to detail. Through this process we discuss and advise on the best possible approach, and lay the groundwork for our comprehensive concept and design phase.

Concept & Design

Design is paramount to the delivery process, so our technical architects will walk you through your room-by-room plan, detailing every inch of your vision. Once a complete matrix is drawn, the documents become the blueprint for your bespoke build.

Project Management

Once designed, the project manager in charge of the build can start to assemble all the pieces of the puzzle to professionally and precisely begin the construction. We work efficiently and with great attention to detail, guaranteeing the highest quality finish.

Installation & Programming

Once our technicians begin integrating and programming your AV solution, our efficient service means that installations are quick, easy and, as we work entirely around the schedule of your build, we do not disrupt your project.

System Training

Each and every system is designed to be as user-friendly as possible. Our technicians will supply you with a handbook for all of our installs and can walk clients through these intuitive interfaces in minutes.

Support & Maintenance

We have trained support staff to handle any issue you may experience with your system. We also offer maintenance packages which extend beyond the manufacturer's warranty on our installed devices.

SAVANT

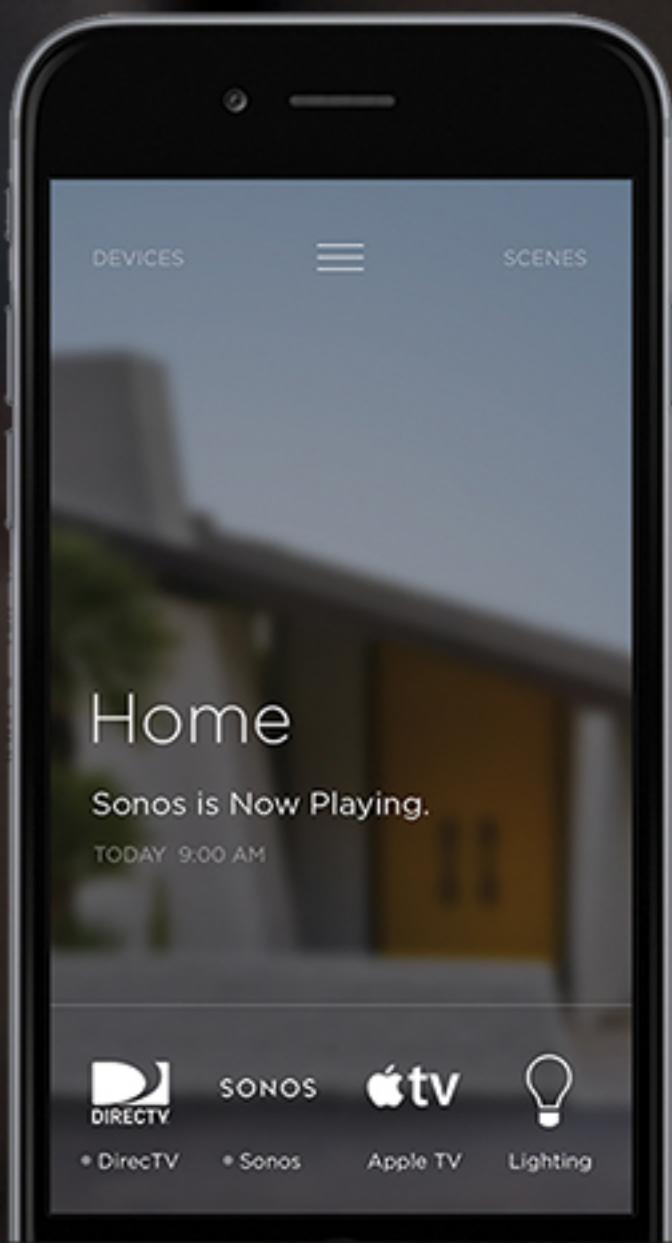

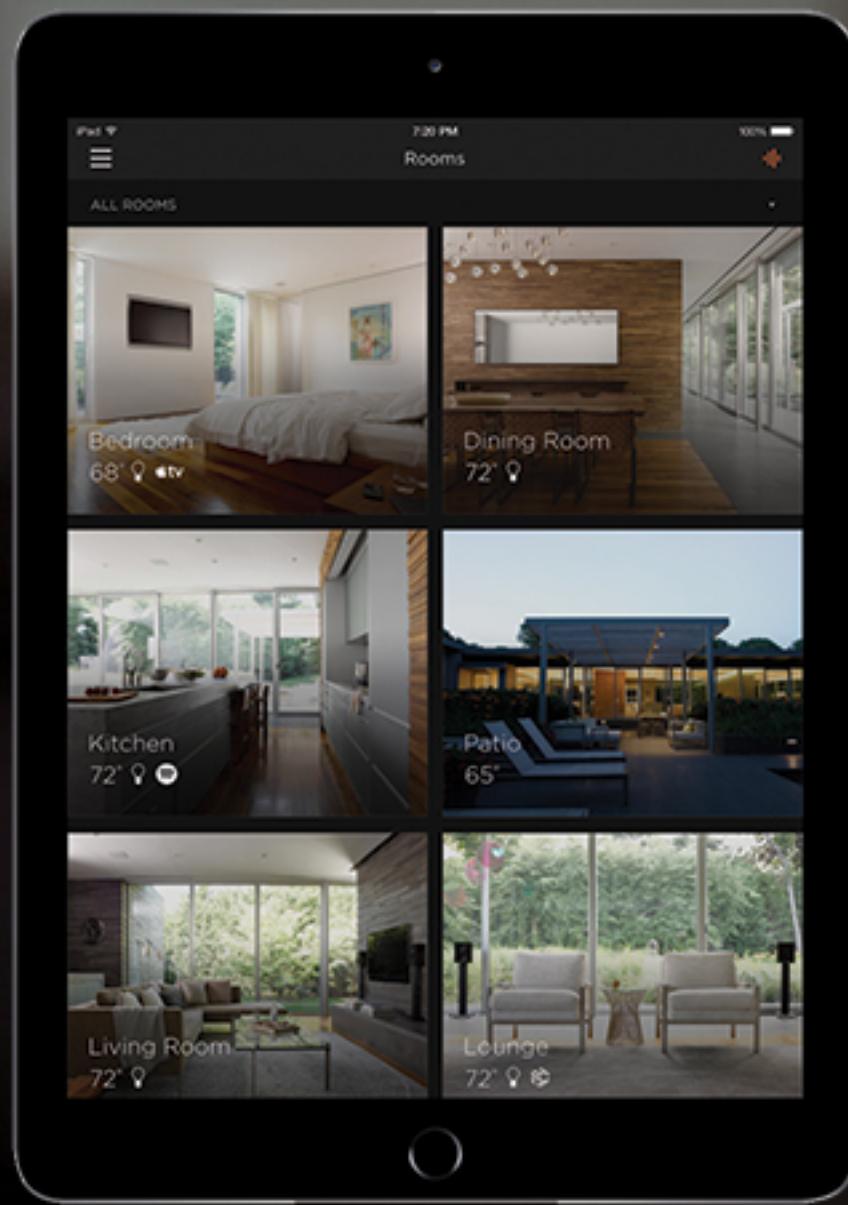

Make Every Day Easier

Savant is a premium automation and control experience that will change the way you enjoy your home. We are proud dealers and integrators of all Savant products and services.

Savant has several remote options that all allow wireless control throughout your home. Other brands and options are also available.

INTEGRATED CONTROL

COMPLETE CONTROL

View multiple rooms and system functions at the same time. Turn the lights off upstairs, whilst watching television downstairs - or view all of your security cameras on one screen, simultaneously.

MOBILE APP

Safely and securely control the house when nobody is home. Control the heating, or turn on the lights, all while being out of the house.

MEDIA & MORE

Our control solutions are scalable because we make sure that they are compatible with other systems. Additional devices can be controlled by the same remote, phone or tablet.

HANDSETS

We also offer remote control via a handset. For these solutions, Savant controllers are available, as are others, such as Logitech handsets.

LIGHTING & SHADING

Creating the right atmosphere is paramount to interior design. We source, install and integrate exceptional lighting systems. Our systems run on a simple program which can be controlled by a manual switch, smart control or even a mobile phone app.

LIGHTING

Our systems offer complete control of the lighting of a home in every room, or across the entire house simultaneously. A homeowner can adjust the intensity of the lighting to have a bright or dim setting in any room where our systems are installed.

FIVE AMP

Five AMP is an elegant electrical system, enabling traditional lighting to become a part of a smart home lighting integration. Side lights, table lamps or more classical or vintage lights are thus able to be a part of any interior design project, whilst being enabled to be remote controlled via handset or phone app.

SHADING

We install and integrate a variety of remote control blinds – from sheer blinds, to blackout blinds as well as motorised curtains. These integrations enable homeowners remote control all from one handset or phone app.

ELECTRICAL

Our qualified electricians can run mains voltage cables to all parts of a property enabling easy installation of power sockets and new lighting circuits. Communitec AV can therefore cover all wiring aspects; from distribution boards to garden lights.

AUDIO SYSTEMS

Communitec AV works with the best audio systems in the world, to create uncompromising, high-definition audio experiences for any space. In order to provide an un-paralled level of finish and design combinations, many of these speakers are uniquely designed to be built into the walls and ceilings.

INVISIBLE SPEAKERS

We integrate exceptional invisible audio systems, which are designed to be built into walls and ceilings with a perfect, flush finish. Indeed, at Communitec AV, we ensure the finish on all of our invisible speaker installations prioritise design and sound, and minimise any disruption.

BESPOKE CINEMA SOLUTIONS

Our bespoke home cinemas combine the highest quality systems into a seamless integration, ensuring that you can experience unequalled cinematic solutions.

HIGH DEFINITION PROJECTORS

We discretely install the highest quality, leading brands of high definition, 4K and 3D projectors onto ceilings or into the walls of any cinema room.

CINEMATIC SURROUND SOUND

We install all major speaker brands including Amina Invisible Speakers, Bowers & Wilkins and Speakercraft, in full 5.1 or 7.2 cinematic surround sound configurations.

LIGHTING & SHADING

Our remotely controlled intelligent lighting solutions provide a multitude of dimmer settings, and lighting combinations, for the ideal cinematic experience.

CINEMA SCALE TVs

In order to provide only the best cinematic experiences, we install world-leading, high-definition, 4K and 3D cinema scale smart TVs.

HEATING & COOLING (HVAC)

We install world-leading systems in Heating, Ventilation and Air Conditioning which can all be remotely controlled with a phone or tablet via a smart thermostat.

HEATING

Smart thermostats learn the habits and comfort levels of their users. This means they learn when to heat a home on-the-fly - even to the extent of turning themselves off when no one is at home. Simply due to the installation of these systems, billions of kilowatts of energy are currently being saved across the globe. In other words, these solutions not only improve comfort, but advertise any new build as an environmentally conscious and technologically innovative home.

COOLING

Furthermore, our HVAC systems also offer intelligent cooling, when running in automatic mode. These systems will detect which rooms require cooling and will turn themselves on and adjust in response to external temperatures. These systems can also be controlled manually, and wirelessly from phone apps; and, of course, the intelligent and responsive cooling systems, further save energy.

SECURITY & SURVEILLANCE

CCTV

We install durable and secure CCTV solutions, which can be viewed remotely, via a phone or tablet. We offer a wide range of possible CCTV systems with features including nightvision, 360 coverage and motion detection.

ALARMS

We install high quality, responsive alarms, which cover front and back doors, to full, floor-specific alarm systems. Crucially, these systems are capable of being securely armed or disarmed remotely.

DOOR ENTRY

Our door entry systems provide video and audio, directly from a property's front door or gate, which can be accessed from a phone or tablet. Alternatively, these door entry systems can be seen, heard and controlled through a mounted wall device, as well as through the internal phone line.

NETWORKING & TELECOMS

NETWORKING

Our in-house team can design networking solutions specifically for your home, encompassing all the media and devices that you use. In all our domestic projects we use the same technology and materials that we use in commercial projects so you get the best possible solution.

TELECOMS

If you need a telecoms solution for your home we can help. Our team of experienced engineers will quickly and professionally setup your system with as little disruption to your household as possible. All the systems we use are designed to be user-friendly, and they are optimised for the home environment.

Part of this quality service includes carefully wiring all the cables and storing them in cabinets. This reduces clutter, keeping the mass of cables required for a networking solution clean and tidy.

LUXURY YACHTS

We source, install, integrate and maintain bespoke AV devices for yachts of all sizes. We work with the cutting edge of AV technology, providing entertainment, security and living solutions that enhance the luxury and enjoyment of any yacht.

We handle the complete installation, from designing the cabling system, to supplying the materials - and we provide continuing maintenance and support. Our services for yachts include media, entertainment, lighting, cooling and heating systems.

All of our systems are installed to marine grade, in order to ensure that your fittings meet all relevant regulations.
